

SENTRY™

The building blocks for “M2M”

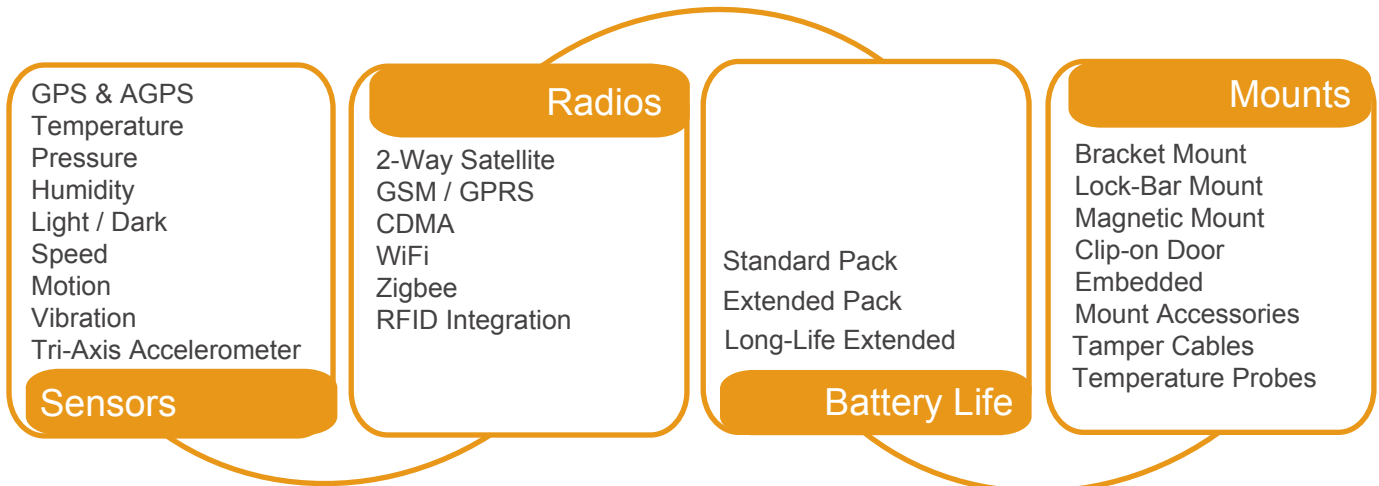

Create features for your specific application requirements fast and easily by leveraging the configurable building blocks of SENTRY.

SENTRY is designed to allow you to choose the right make-up of sensors, radios, batteries, and mounting options to fit perfectly to your remote asset needs without the delay in engineering design cycles and new product development.

Menu

All SENTRY devices leverage the same intelligent board design. From here, you can choose options from the menu below to create your own device specific to your needs. OnAsset provides professional services to enable customized configuration of unique SENTRY designs.

My SENTRY Device

After configuration designs are accepted and developed according to your specifications, you may also elect to private-label your device including custom moldings and color designs.

SENTRY Products

Making deployment easier than ever with intelligent, off-the-shelf products. Know more, get more, guaranteed.

OnAsset provides pre-configured SENTRY devices for specific vertical market applications ready-to-go. Each device comes equipped with SENTRYware software enabling you to configure sensor thresholds and alarm conditions for further customization.

SENTRY FlightSafe

Air Cargo

SENTRY FlightSafe is designed specifically to enable guaranteed, FAA compliant travel for Air Cargo monitoring and chain of custody applications. Simply place the SENTRY inside the box with the product and send it on its way.

Includes patent-pending software signature for multi-mode, sensor-based aircraft detection.

SENTRY Extended Pack

Trucking & Transportation

SENTRY for trucking and transportation enables intelligent detection of possible theft scenarios based on real-time situational analysis of multiple sensor events.

Includes patent-pending software signature for intelligent, early warning against trailer theft.

ContainerSafe & Xpress

Intermodal Container

The ContainerSafe product families provide a variety of choice in form factor and design for monitoring intermodal shipments as well as perishable goods and door seal solutions.

Includes easy-to-use mounting accessories with no special tools required for installation.
